Who we are

DataScouting is a software research and development company specialized in creating open source media intelligence and analysis platforms. Using Machine Learning technologies such as Text and Video Analytics, Information Classification, Speech Recognition, and Optical Character Recognition, DataScouting’s platforms automatically augment textual and audiovisual streams, helping you to manage and easily identify content of interest.

Trust building

With proven expertise, highly qualified personnel and by constantly investing in R&D in Artificial Intelligence, DataScouting can help you collect, process, organize and enrich unstructured open-source data and convert them to actionable information by designing and building high quality, reliable and secure applications tailored to meet your requirements.

OPEN-SOURCE INTELLIGENCE

Smart Data... Smarter Decisions

An end-to-end media intelligence and OSINT platform to collect and analyze data from Online/Social, Broadcast, Print and other data sources and transform them into actionable information. Designed to help government communication, compliance and security departments, public and private organizations to identify key content of interest across multiple sources, take decisions and react promptly to threats.

- Collect and manage information in your on-premise or cloud infrastructure from TV, Radio, Social Media, Websites, Print or any additional data sources in real time for operational and intelligence purposes.
- Use DataScouting’s AI modules to help you extract data and find actionable information and connections in real time.
- Identify Hybrid warfare and disinformation campaigns, prevent and manage crisis that start/propagate from media for national security.
- Compliance monitoring.
- Identify Hate Speech in media.
- Strategic enabler of decision and policy-making for Foreign and Domestic Affairs.
- Understand multilingual content using automatic machine translation and use automatic sentiment analysis and summarization.
- Create and share intelligence reports and data in real time through multiple channels.

Technologies / AI modules

- Automatic Speech Recognition
- Face/Logo Recognition
- News Ticker Extraction
- Entity Recognition
- Optical Character Recognition
- Automatic Machine Translation
- Automated Sentiment Analysis
- Hate Speech Detection
- Summarization

Security, Training and Support

- Installed in your own datacenter or on the cloud with your data fully secured.
- The system is built to work fully offline, with the highest security measures.
- Technical and OSINT training seminars
- 24/7 support
