Integrated Library Systems

- Evolve and expand your automated catalog by implementing Koha, the most advanced open source Integrated Library System in use today by hundreds of libraries of all sizes worldwide. You can simplify the process of collection management and help users navigate and locate content with a clear and simple interface.

Institutional Repositories

- . Solutions to collect, preserve, and make any digital object from cultural heritage to scientific scholarship openly available. Set up your own institutional repository including all types of digital content from gray literature to scientific papers and research data, with a focus on open access, using proven open source software platforms.

Collection Management Systems

- . . . Archives, museums, cultural organizations and companies can organize their archives and manage their digital collections with the use of open source applications like OMEKA and AtoM. Optimize management and access to information using easy to use, web based archival description software and web publishing platforms.

Meta-search engines

- Manage your library's resources in a better, more effective way and have more satisfied users by implementing a meta-search engine like VuFind. A tool that allows users to search and browse through OPAC, Institutional Repositories, and any other Library Collections from a simple search box and find the needed information in milliseconds time.
